

Valve terminal VTUX

FESTO

Key features

Innovative

- Compact design with low overall height and width
- Manifold sub-bases with different widths for different flow rate with the same valves
- Vacuum generator integrated in the manifold sub-base with pressure sensor and ejector pulse
- Flow rate up to 690 l/min
- Flexibly configurable push-in fittings as a cartridge, easy to exchange in just a few simple steps
- Connection to the remote I/O system CPX-AP-I
- Connection to the remote I/O system CPX-AP-A
- IO-Link® interface
- Internal serial communication as infrastructure for highly integrated technology modules

Versatile

- Modular system offering a range of configuration options
- Manifold sub-bases for 4 valves or an individual valve, can be combined as required
- System can be extended as needed with individual manifold sub-bases and modular tie rods
- Up to 64 valve positions
- Can be converted and extended at a later date
- Air supply can be extended via additional pressure zones using supply modules
- Can be assembled using individually ordered components
- Wide range of electrical connection types for multi-pin: Sub-D, ribbon cable or spring-loaded terminal

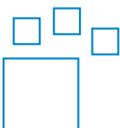

Reliable

- High output reserves thanks to large pneumatic cross sections and exhausting with high flow rates
- Resilient thanks to high mechanical rigidity
- Lightweight polymer components
- Fast troubleshooting with LEDs on the valves
- Easy to service with replaceable valves and manifold sub-bases
- Manual override either non-detenting, detenting or protected against unauthorised activation (concealed)

Easy to install

- Fast and reliable delivery as a ready-to-install and tested unit or for self-assembly from individual components
- Reduced selection, ordering, installation and commissioning costs
- Solid wall mounting or DIN rail mounting

Ordering data – Product options

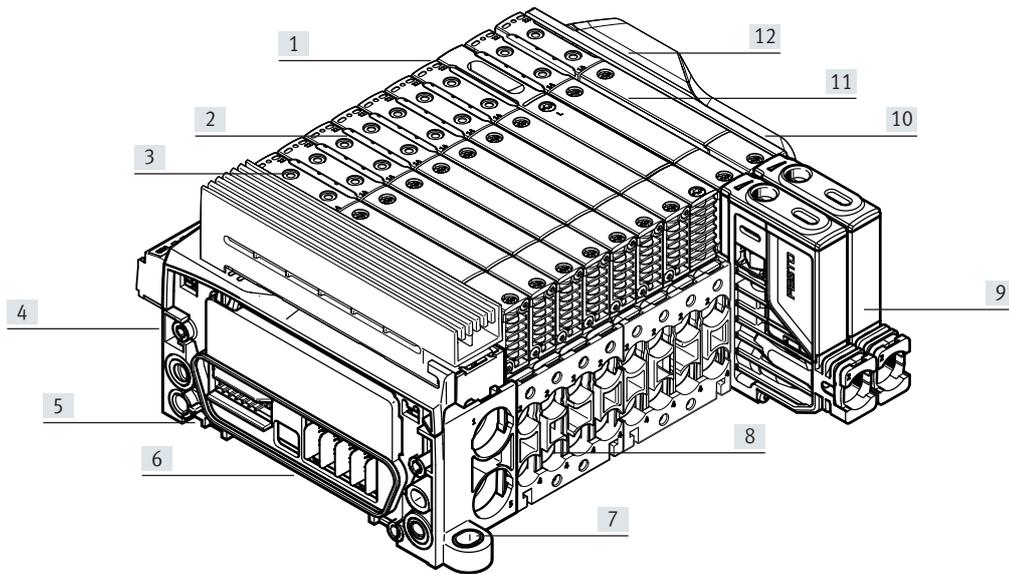

Configurable product
This product and all its product options can be ordered using the configurator.

The configurator can be found at
→ www.festo.com/catalogue/...
Enter the part number or the type.

Key features

Control variants of the valve terminal VTUX

The VTUX can be integrated in control systems in a variety of ways. There are a range of designs available for actuation via electrical multi-pin connection. Likewise, valve terminals can be connected via IO-Link® using round plugs with a high degree of protection or using terminal connections.

The valve terminals are particularly versatile and high-performing thanks to the perfect integration into the Festo AP Automation Platform. In combination with the remote I/O system CPX AP-A, it is possible to complete valve terminals by configuring and combining them with a range of peripheral modules.

Integration into the remote I/O system CPX-AP-I offers the option of decentralised solutions in particular. It is thus possible to have particularly space-saving solutions close to the pneumatic drives, enabling rapid movements and short cycle times.

A unique feature is the ability to combine the remote I/O system CPX-AP-A and the remote I/O system CPX-AP-I for a combination of centralised and decentralised machine functions. This modularity makes the VTUX perfectly adaptable to any application.

Key features

Valve terminal selection

Valve terminal configurator

The appropriate valve terminal VTUX can be selected quickly and easily using the online catalogue. This includes a convenient valve terminal configurator, making it much easier to order the right product.

The valve terminals are assembled according to your order specification and are individually checked. This reduces assembly and installation time to a minimum.

Order a valve terminal VTUX using the order code.

2D/3D CAD data

You can request the CAD data for a valve terminal you have configured. To do so, start the product search as described above. Click on the CAD/EPLAN symbol. On the next page, you can generate a 3D preview or request a data format of your choice via e-mail.

Multi-pin plug connection

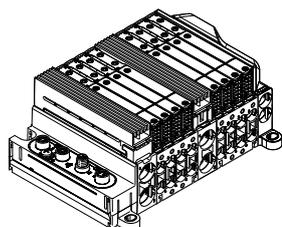

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-core cable to the multi-pin plug connection. This substantially reduces installation time. Internal signal flow via parallel communication.

The valve terminal can be equipped with max. 32 solenoid coils. This corresponds to 2 to 32 valves.

Versions:

- Sub-D connection
 - Pre-assembled multi-pin cable
 - Multi-pin cable for self-assembly
 - Connection on top or at the side
- Ribbon cable connection
- Terminal strip connection

Fieldbus interface from the remote I/O system CPX-AP-I

CPX-AP-I is a flexible, decentralised, compact and lightweight remote I/O system with a high protection rating IP65/IP67.

A remote I/O system CPX-AP-I comprises a bus interface and at least one other module. System communication between the modules takes place via connecting cables.

The process data is exchanged cyclically. The following module types are available:

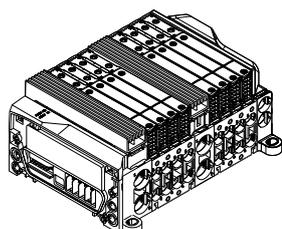

- Bus interface
- Input modules
- Input/output modules
- Interface for valve terminal

Fieldbus protocols that can be combined with VTUX:

- PROFINET
- EtherNet/IP
- EtherCAT®

Internal signal flow via serial or parallel communication.

Fieldbus interface from the remote I/O system CPX-AP-A

CPX-AP-A is a flexible, central, compact and lightweight remote I/O system with a high degree of protection to IP65/IP67.

A bus node directly mounted on the valve terminal VTUX manages communication with a higher-order PLC.

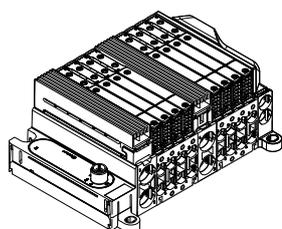

A compact unit, combining pneumatics, sensors and a bus interface, can be designed using directly linked input and output modules.

Internal signal flow via serial or parallel communication.

Fieldbus protocols:

- PROFINET
- EtherNet/IP
- EtherCAT®

IO-Link®

IO-Link® consists of a central master and the IO-Link® devices connected via special connecting cables. This permits a decentralised layout of the devices.

The connection type corresponds to a star topology.

As well as transmitting the communication data, the IO-Link® interfaces also handle the power supply for the connected devices.

The maximum length of a string is 20 m.

Internal signal flow via parallel communication.

Peripherals overview

Modular pneumatic components

The modular design of the valve terminal VTUX enables outstanding flexibility right from the planning stage and offers maximum ease of service in operation.

The system consists of manifold sub-bases and valves.

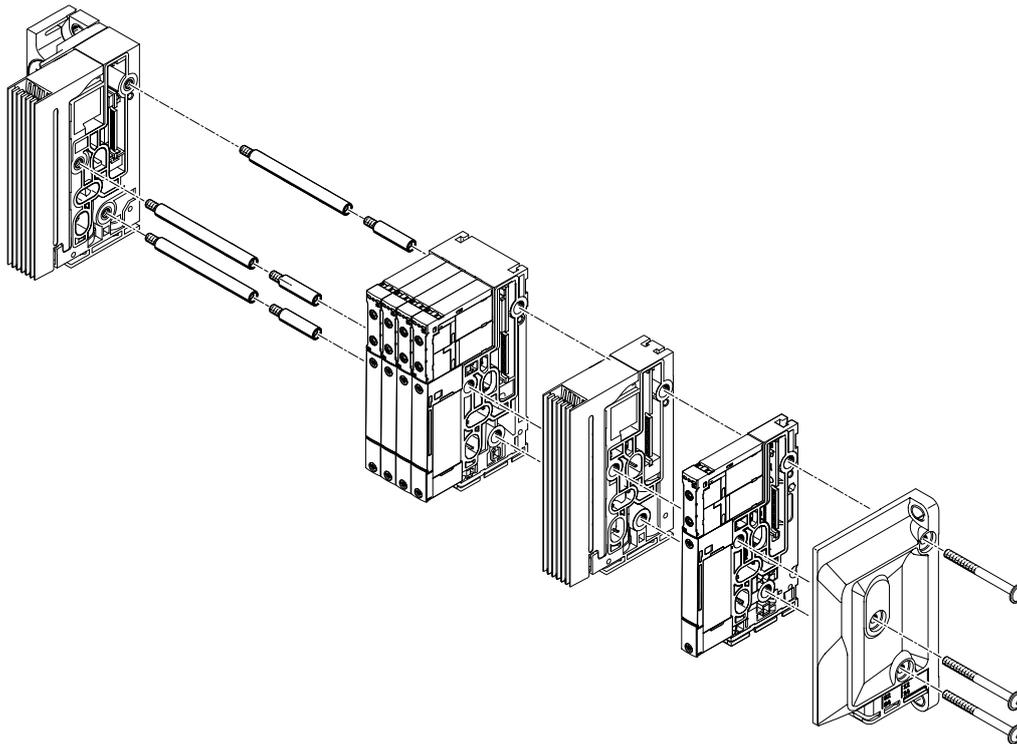

The manifold sub-bases form the support system for the valves.

They contain the electrical connections, the ducts for supplying compressed air to and exhausting the valve terminal as well as the working ports for the pneumatic drives for each valve.

The manifold sub-bases are connected by a tie rod system. This comprises a tie rods and a screw set. The combination of tie rods and screw set is selected according to the chosen number of individual sub-bases.

A valve terminal can be easily extended by adding individual manifold sub-bases or supply modules. This is done simply by inserting suitable tie rod extenders.

This ensures that the valve terminal can be rapidly and reliably extended.

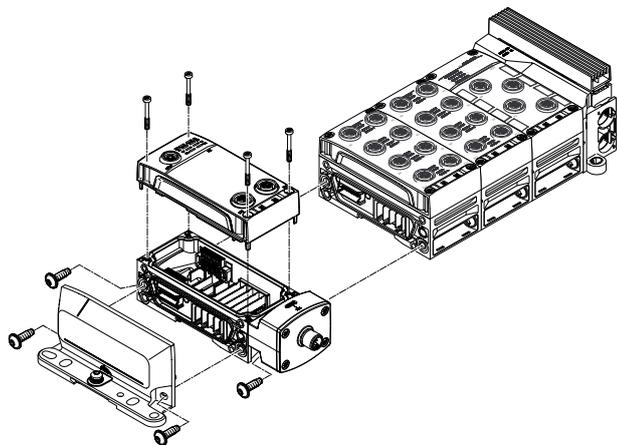

Note

The tie rod system for the valve terminal VTUX consists of at least two manifold sub-bases or one manifold sub-base and one supply module.

Peripherals overview

Modular electrical peripherals

The mechanical connection between the CPX-AP-A modules is created using angled fittings.

The remote I/O system CPX-AP-A can therefore be flexibly expanded at any time.

The advantages of polymer (low weight) and metal (sturdy, high EMC compatibility) are perfectly combined by using high-quality polymer materials.

The I/O modules, connection blocks and bus nodes of the remote I/O system CPX-AP-A are mounted on the interlinking blocks using 4 screws and can be swapped or modified in almost any way.

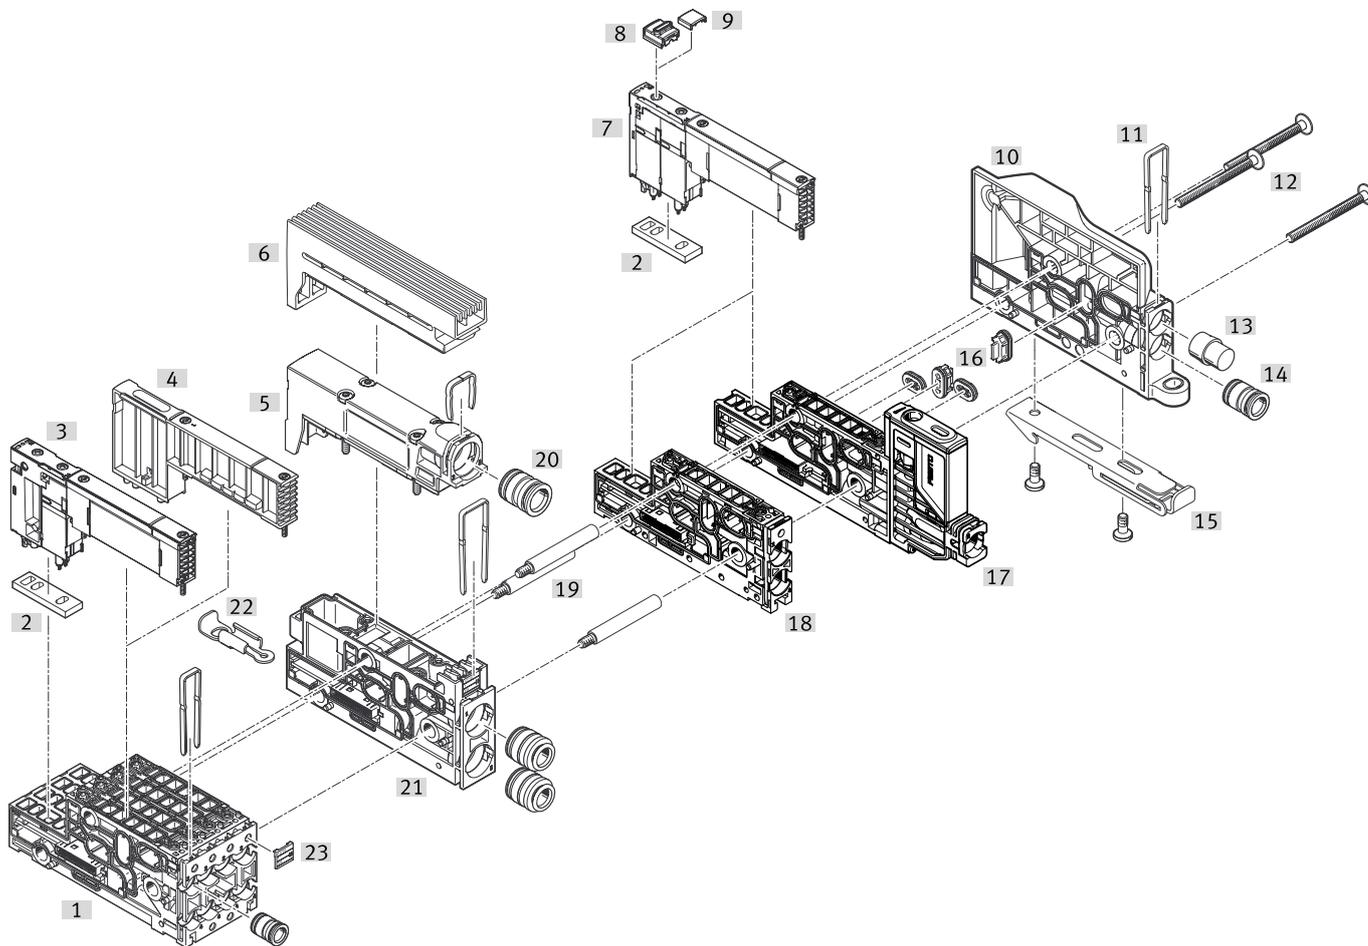

Peripherals overview

Pneumatics of the valve terminal with parallel communication

The manifold sub-bases are available individually with one valve position or with a grid of four valve positions.

The manifold sub-bases include the electrical links for:

- Valves with one solenoid coil or
- valves with two solenoid coils
- Valve positions with two solenoid coils occupy two addresses and can be equipped with any valve or a cover plate.
- Valve positions with one solenoid coil occupy a single address and can only be equipped with single solenoid valves or a cover plate.

Peripherals overview

Valve terminal with multi-pin plug connection:

Order code:

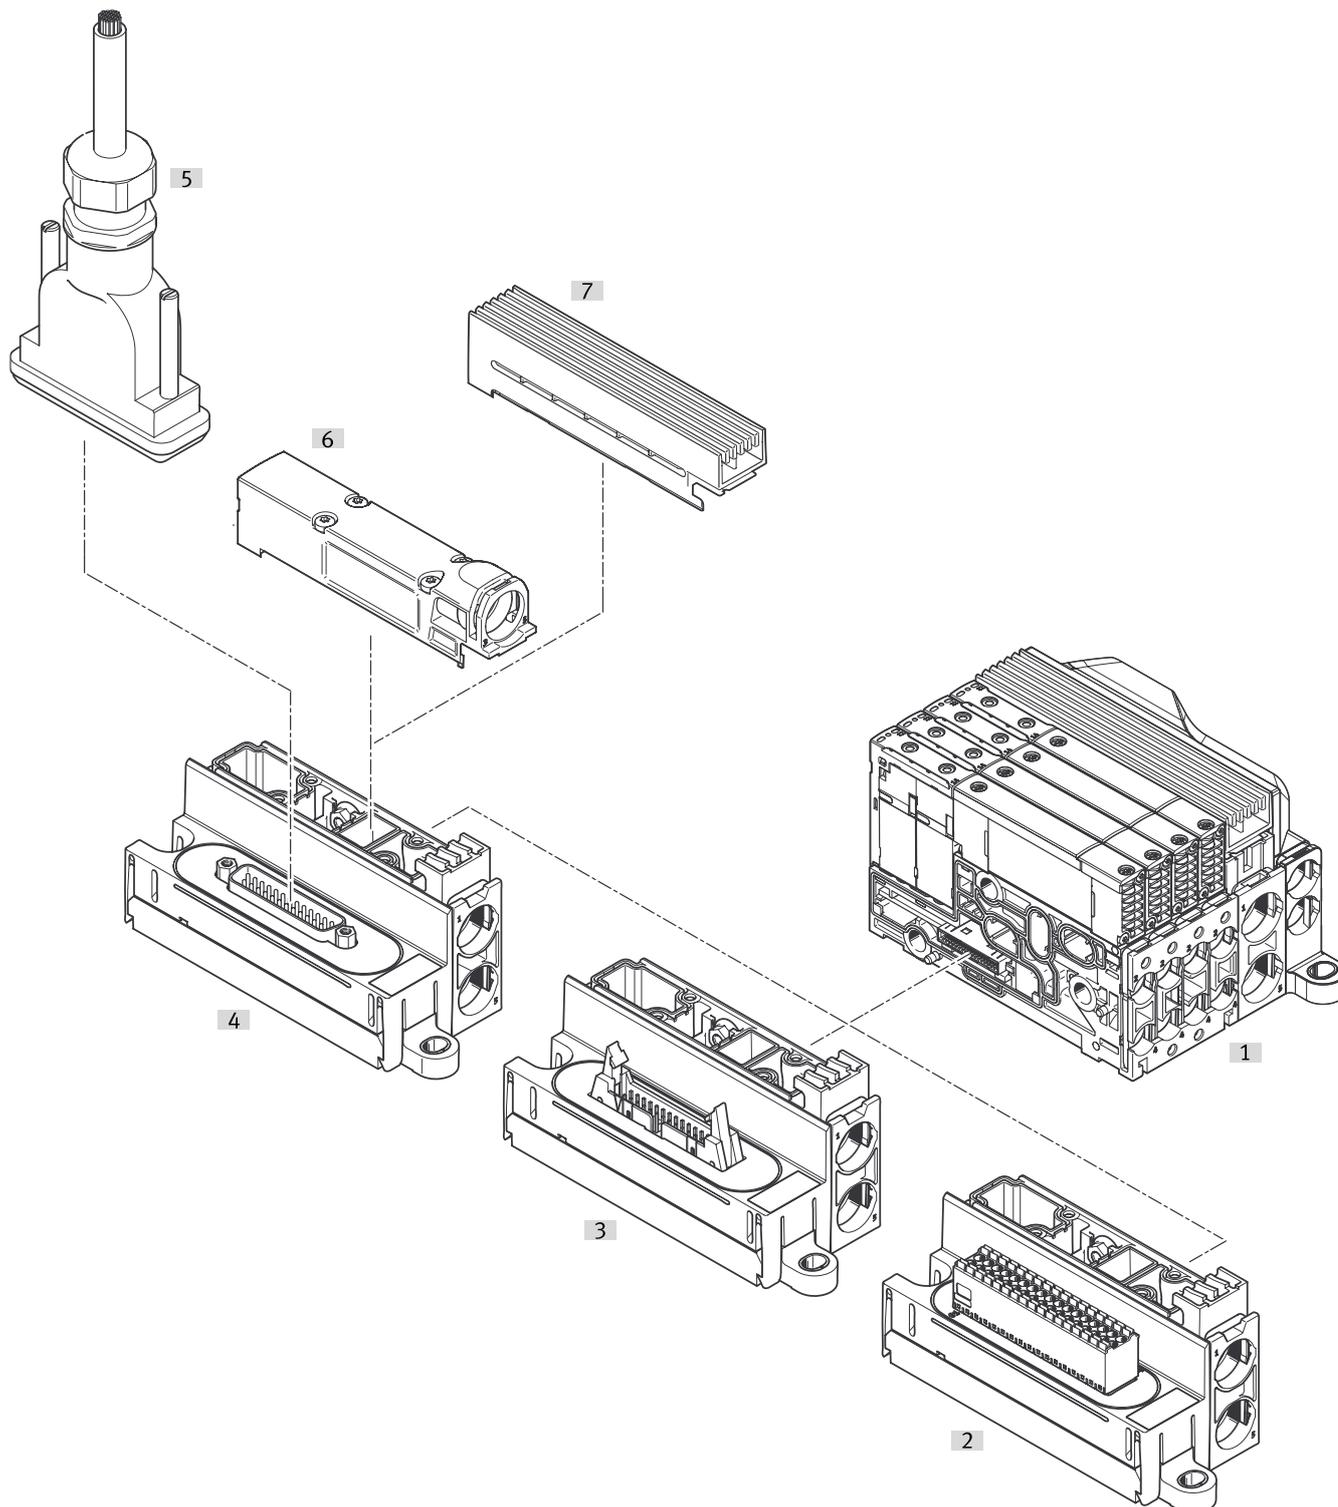

- VTUX-A-P-M... for pneumatics with parallel communication

Valve terminals VTUX with multi-pin plug connection can be expanded by up to 32 solenoid coils/valve positions.

The multi-pin plug connection can be ordered as a Sub-D connection (25- or 44-pin) or as a terminal strip (34-pin) or as a ribbon cable connection (26-pin).

The Sub-D multi-pin plug connection (25- and 44-pin) is available with degree of protection IP40 and IP65; the terminal strip and ribbon cable connection with IP40.

Pre-assembled cables of different lengths with degree of protection IP40 or IP65/67 are available as accessories for the Sub-D multi-pin plug connection (25- and 44-pin).

Peripherals overview

Peripherals overview

Valve terminal with multi-pin plug connection:

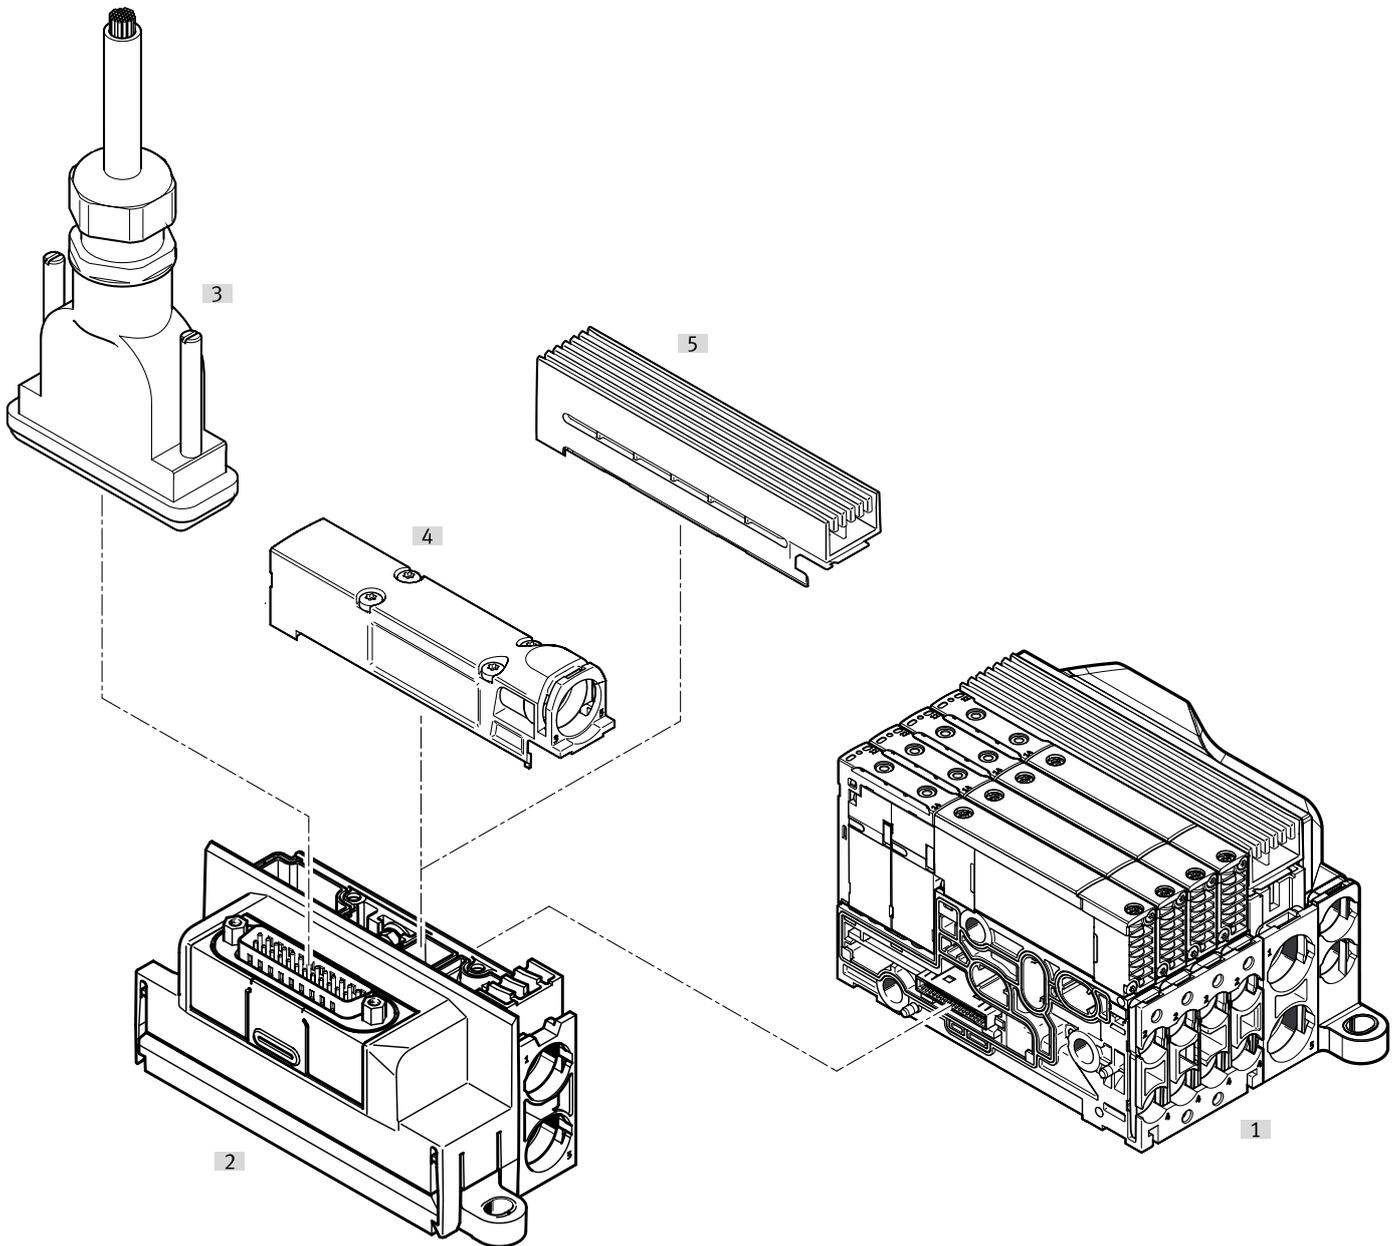

Order code:

- VTUX-A-P-M... for pneumatics with parallel communication

Valve terminals VTUX with a rotatable multi-pin plug connection can be expanded by up to 24 solenoid coils/valve positions.

The multi-pin connector can be ordered as a Sub-D connector (25-pin). The rotatable Sub-D multi-pin connector is available in protection class IP40.

Pre-assembled cables in various lengths are available as accessories for the rotatable Sub-D multi-pin connector.

Peripherals overview

Peripherals overview

Valve terminal with fieldbus interface, remote I/O system CPX-AP-A

Order code:

- VTUX-A-P-APA-... for pneumatics with parallel communication
- VTUX-A-S-APA-... for pneumatics with serial communication
- CPX-AP-A-... for the electrical peripherals

Valve terminals with CPX-AP-A connection can be expanded with up to 32 solenoid coils/valve positions with parallel communication and with up to 64 valve positions with serial communication.

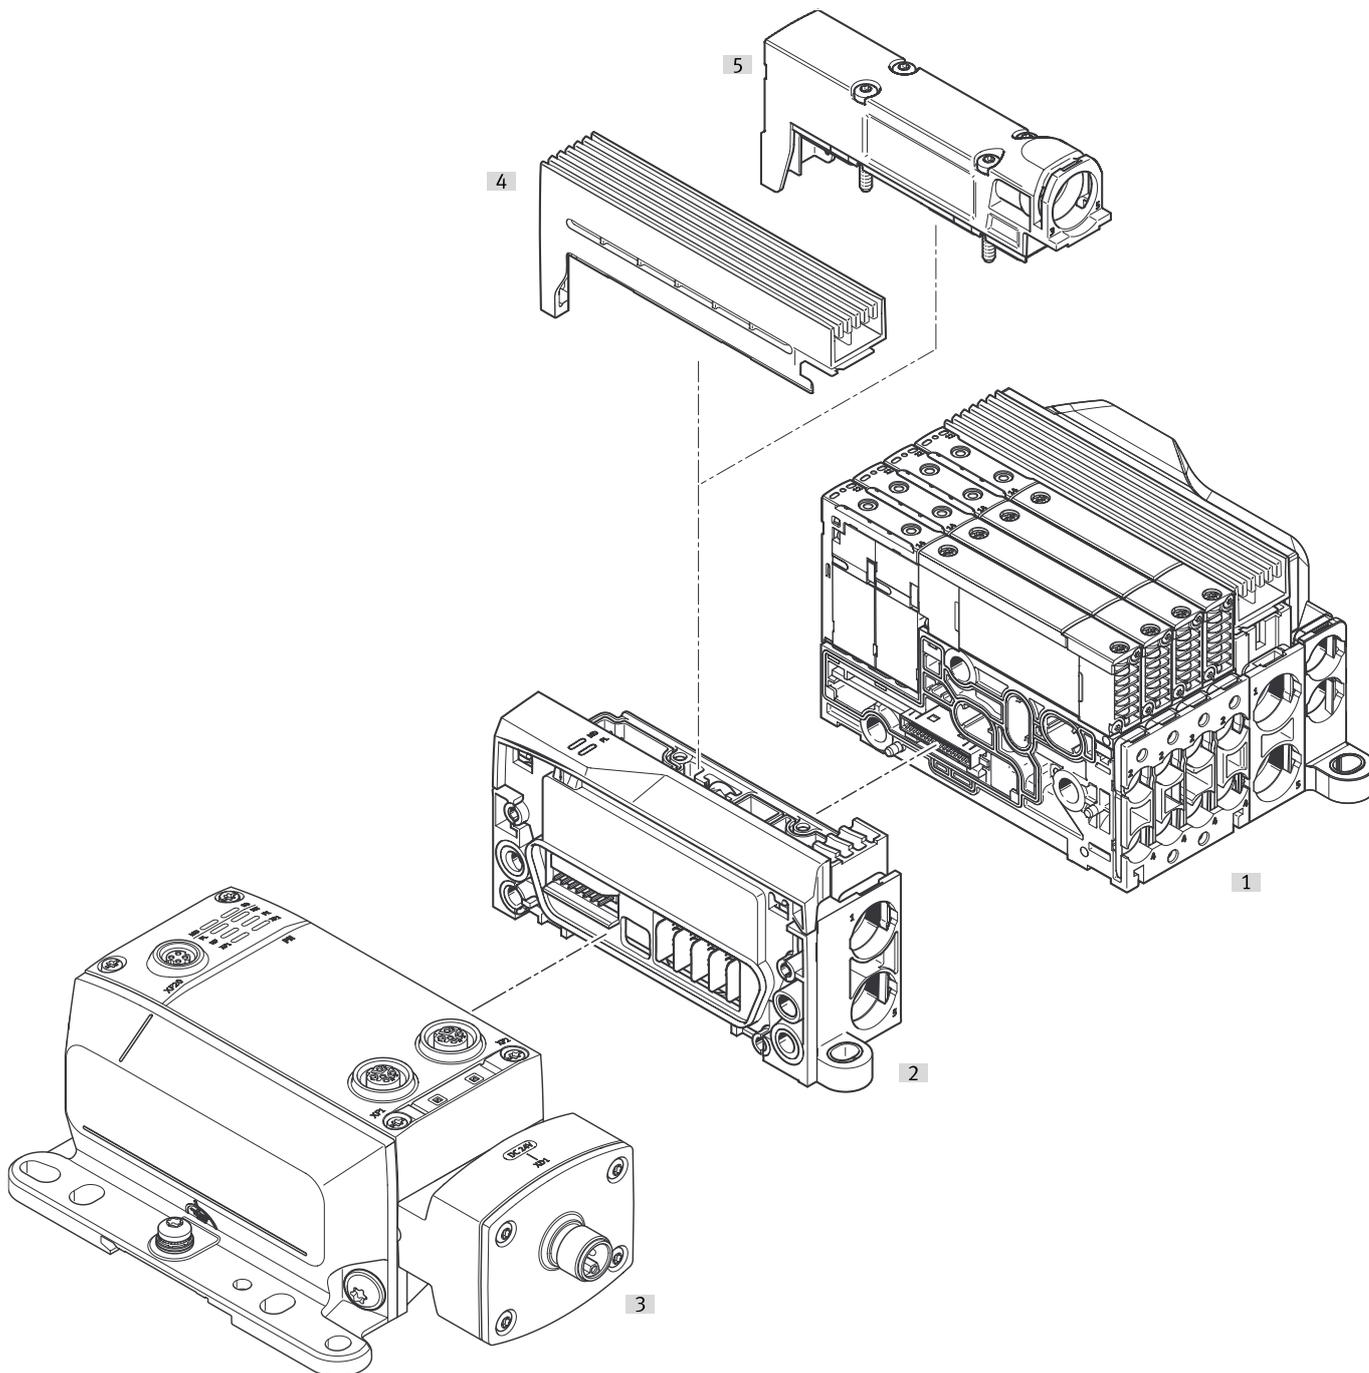

In combination with single-solenoid valves, up to 32 valve positions (parallel communication) or 64 valve positions (serial communication) can be fitted.

When used exclusively with valves having two solenoid coils (double-solenoid valves, 5/3-way valves, 2x 3/2-way valves), the maximum number of valve positions reduces to 16 with parallel communication.

Each valve position can be equipped with any valve or a cover plate. The rules for CPX-AP-A apply to the equipment that can be used with the electrical peripherals CPX-AP-A.

In general:

- Digital inputs/outputs
- Parameterisation of inputs and outputs
- Integrated, convenient diagnostics
- Preventive maintenance concepts

Valve terminal with IO-Link® interface (and bus node)

Order code:

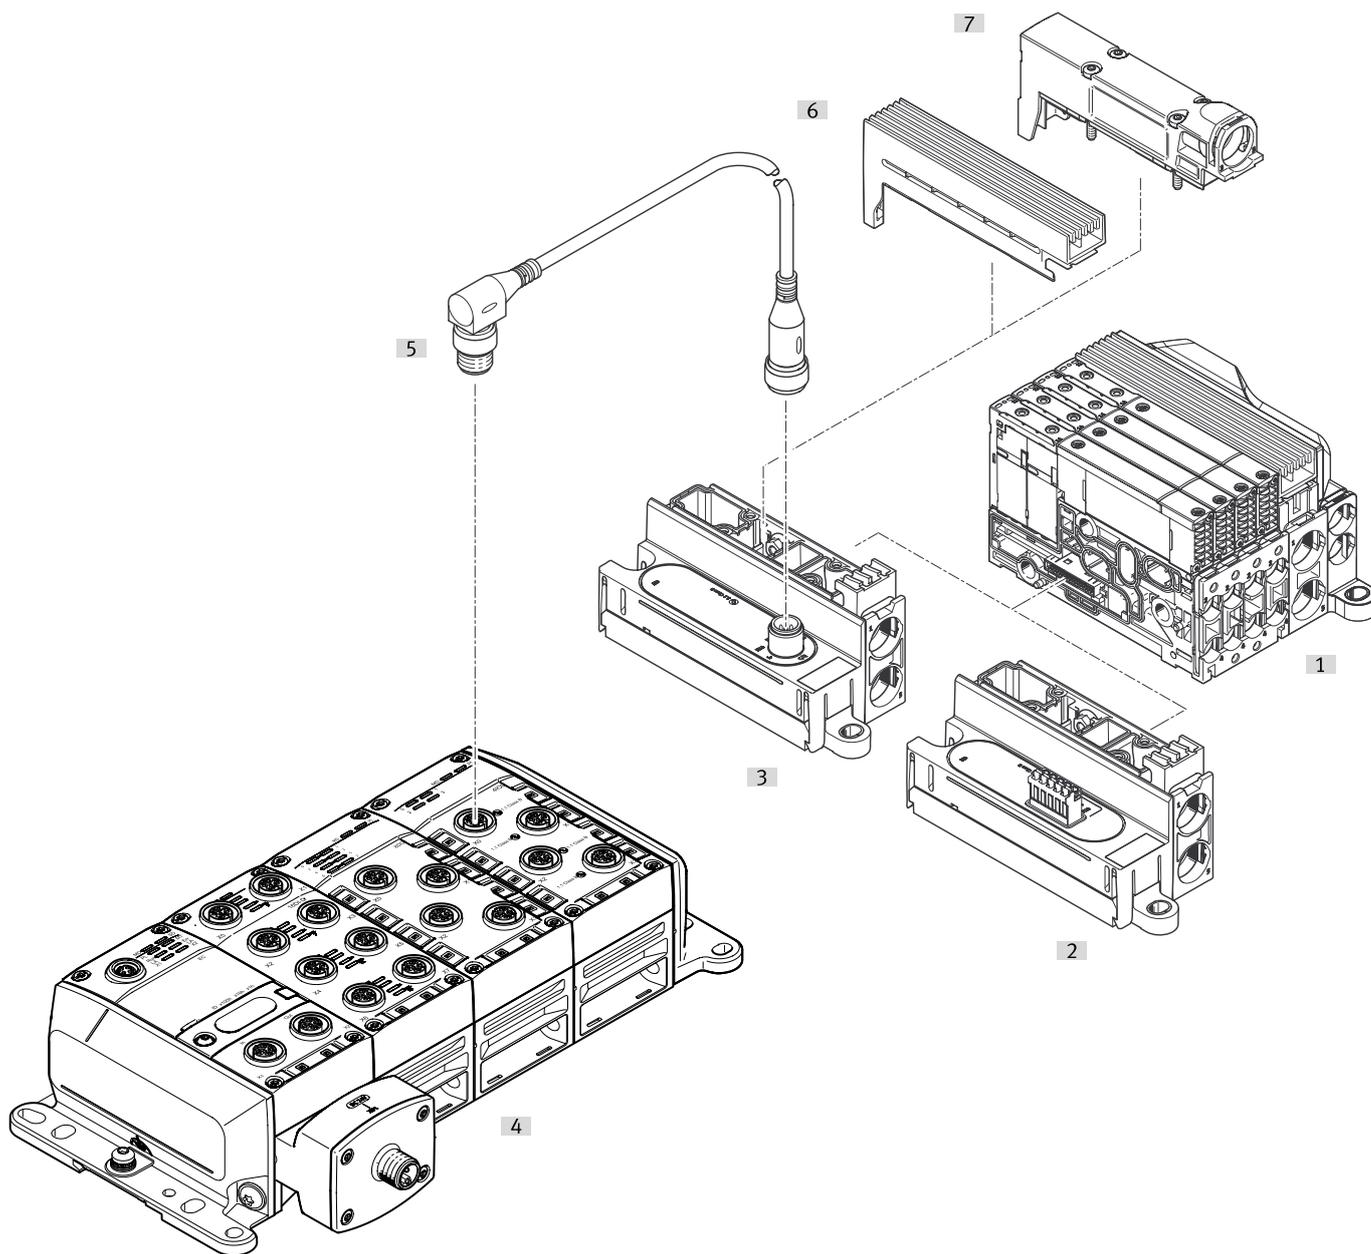

- VTUX-A-P-IO... for pneumatics with parallel communication
- CPX-AP-A... for the bus node

Valve terminals with IO-Link® interface can be expanded by up to 32 solenoid coils/valve positions.

Up to 32 valve positions can be equipped with single solenoid valves.

The maximum number of valve positions is reduced to 16 if only valves with two solenoid coils are used (double solenoid valves, 5/3-way valves, 5/4-way valves, 2x 3/2-way valves).

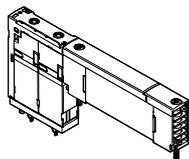

Each valve position can be equipped with any valve or a cover plate.

[7] Plate	Exhaust plate for ducted exhaust air	76

Key features – Pneumatic components

Sub-base valve

VTUX offers a comprehensive range of valve functions. The spool valves VTUX of width 10 mm offer a particularly high flow rate. They are used on manifold sub-bases of width 10 mm and 12 mm with a tubing connection up to 8 mm.

Valves of size 10 mm are a particularly effective option for compact valve terminals that also enable applications with outstanding flow rate performance when using 8 mm tubing connections.

This eliminates having to select and decide between different valve sizes and reduces the complexity for planned applications.

Mounting valves on manifold sub-bases offers a range of advantages.

The valves are secured using two screws and can be easily replaced. The 5/2-way and 3/2-way valves are designed to have a negative overlap. This thus enables the working ports to be exhausted in the de-energised state.

Pilot air (duct 12/14) is supplied via the manifold sub-bases, allowing it to be interrupted and exhausted.

All valves have pneumatic pilot control for optimising performance.

Irrespective of the valve function, there are sub-base valves with one solenoid coil (single solenoid) or with two solenoid coils (double solenoid or two single solenoid valves in one housing).

Design

Replacing valves

The valves are attached to the sub-base using two screws. The tubing remains on the manifold sub-base, which prevents mix-ups during servicing.

which means that they can be easily replaced. The sturdy mechanical structure of the sub-base ensures efficient, durable sealing.

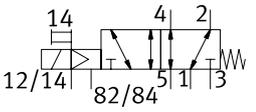

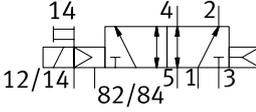

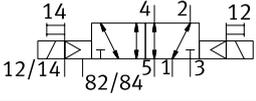

Extension

Cover plates for reserve positions can be replaced by valves at a later date.

The dimensions, mounting points as well as the existing pneumatic installation do not change.

Note

A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

5/2-way valve	Code	Assigned addresses	Description
Circuit symbol 	Position function 1-32: A	1	<ul style="list-style-type: none"> • Single solenoid • Mechanical spring return • Reversible • Operating pressure –0.09 ... +0.7 MPa
	Position function 1-32: M	1	<ul style="list-style-type: none"> • Single solenoid • Pneumatic spring return • Operating pressure +0.2 ... +0.7 MPa
	Position function 1-32: J	2	<ul style="list-style-type: none"> • Double solenoid • Limited reversibility • Operating pressure –0.09 ... +0.7 MPa

Key features – Pneumatic components

2x 3/2-way valve			
Circuit symbol	Code	Assigned addresses	Description
	Position function 1-32: NS	2	<ul style="list-style-type: none"> • Single solenoid • Normally open • Mechanical spring return • Reversible • Operating pressure 0 ... 0.7 MPa
	Position function 1-32: K	2	<ul style="list-style-type: none"> • Single solenoid • Normally closed • Mechanical spring return • Reversible • Operating pressure 0 ... 0.7 MPa
	Position function 1-32: KC	2	<ul style="list-style-type: none"> • Single solenoid • Normally closed • Pneumatic spring return • Operating pressure 0.15 ... 0.7 MPa
	Position function 1-32: KV	2	<ul style="list-style-type: none"> • Single solenoid • Normally closed • Pneumatic spring return • For manifold sub-base for vacuum
5/3-way valve			
Circuit symbol	Code	Assigned addresses	Description
	Position function 1-32: G	2	<ul style="list-style-type: none"> • Mid-position closed • Mechanical spring return • Reversible • Operating pressure -0.09 ... +0.7 MPa
5/4-way valve			
Circuit symbol	Code	Assigned addresses	Description
	Position function 1-32: ND	2	<ul style="list-style-type: none"> • Exhausted • Mechanical spring return • Reversible • Operating pressure -0.09 ... +0.7 MPa

Note

The valve functions of an exhausted and pressurised 5/3-way valve can be realised using the 3/2-way valves "normally closed" and "normally open", respectively, with mechanical spring return.

The negative overlap makes it possible to exhaust the working ports in the de-energised state.

Key features – Pneumatic components

Application areas 5/4-way valve

Smart Switching Lite

The 5/4-way valve allows the supply air to be switched off during movement, thus saving energy and improving cycle times. The cylinder end position is still reliably reached with the help of the expansion energy. The cylinder chambers can be individually pressurised and blocked. As the pressure in the end position is reduced, the subsequent movement can be carried out more dynamically.

Smart Switching Lite is the complete solution for valve and control logic (PLC module). The PLC module can be integrated into the existing control logic; it determines the required pressurisation time and detects when the end position has been reached via limit switches.

Appropriate application notes with further information are also available for the PLC modules.

Holding function for vacuum suction nozzle

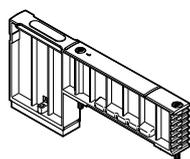

As soon as an emergency stop (switching off the load voltage) is triggered during vacuum generation, the vacuum suction nozzle remains in vacuum generation mode.

If the air saving function is active, it remains active.

Features and benefits:

- Special valve with locking function
- To save energy, one pulse is enough to switch the vacuum on and off
- Integrated air-saving function
- Integrated sensor for continuously measuring the total vacuum level
- Integrated power failure function

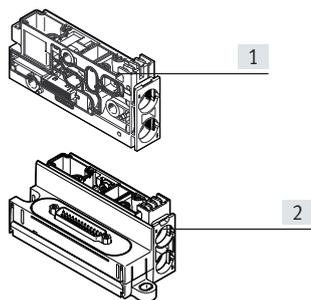

Cover plate

Cover plate (code L) without valve function, for reserving valve positions on a valve terminal.

Valves and cover plates are attached to the manifold sub-base using two screws.

Compressed air supply and exhaust

- [1] Supply module
- [2] Left end plate

The valve terminal VTUX can be supplied with compressed air at one or more points via the left end plate and/or via supply modules. The generously sized pneumatic system ensure that all components will offer good performance, even with large-scale extensions.

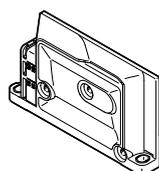

Exhausting (ducts 3 and 5) takes place either via silencers or ports for ducted exhaust air, via the supply modules or the left end plate.

There are two variants for exhausting:

- Exhaust air 3/5 via flat plate silencer
- Exhaust air 3/5 ducted

Ducts 3 and 5 are separate in the terminal and are only joined together in the supply module/left end plate. The pilot exhaust air (duct 82/84) is completely separate from ducts 3 and 5.

Pilot air supply

The valve terminal VTUX is supplied with pilot air only via the right end plate.

The type of pilot air supply can be selected using a separator in duct 1 of the end plate:

- Internal (from duct 1) or
- External (from duct 12/14)

The actual control pressure required depends on the valves used on the terminal. Internal pilot air supply can be selected if the supply pressure of the terminal is correspondingly high. In this case, the pilot air supply is branched by an internal connection from duct 1 in the right end plate.

The operating pressure in the right pressure zone must be at least equal to the highest control pressure required for the entire valve terminal. Port 12/14 on the right end plate is sealed using a blanking plug.

- Note

If a gradual pressure build-up in the system using a soft-start valve is chosen, an external pilot air supply should be connected so that the pilot pressure applied during switch-on is already very high.

Creating pressure zones and separating exhaust air

VTUX offers a number of options for creating pressure zones if different working pressures are required. A pressure zone is created by separating the internal supply duct between any two manifold sub-bases. Every pressure zone must have its own compressed air supply. Compressed air can be supplied and exhausted via the left end plate and/or the supply modules.

The position of the supply modules and the pressure zone separation can be freely chosen with the valve terminal VTUX.

The separators for pressure zone separation are integrated into the terminal at the factory as specified in your order.

Their position is marked using corresponding inscription labels. Duct separation takes place between two manifold sub-bases.

Creating pressure zones

Key features – Pneumatic components

Examples: Compressed air supply and pilot air supply

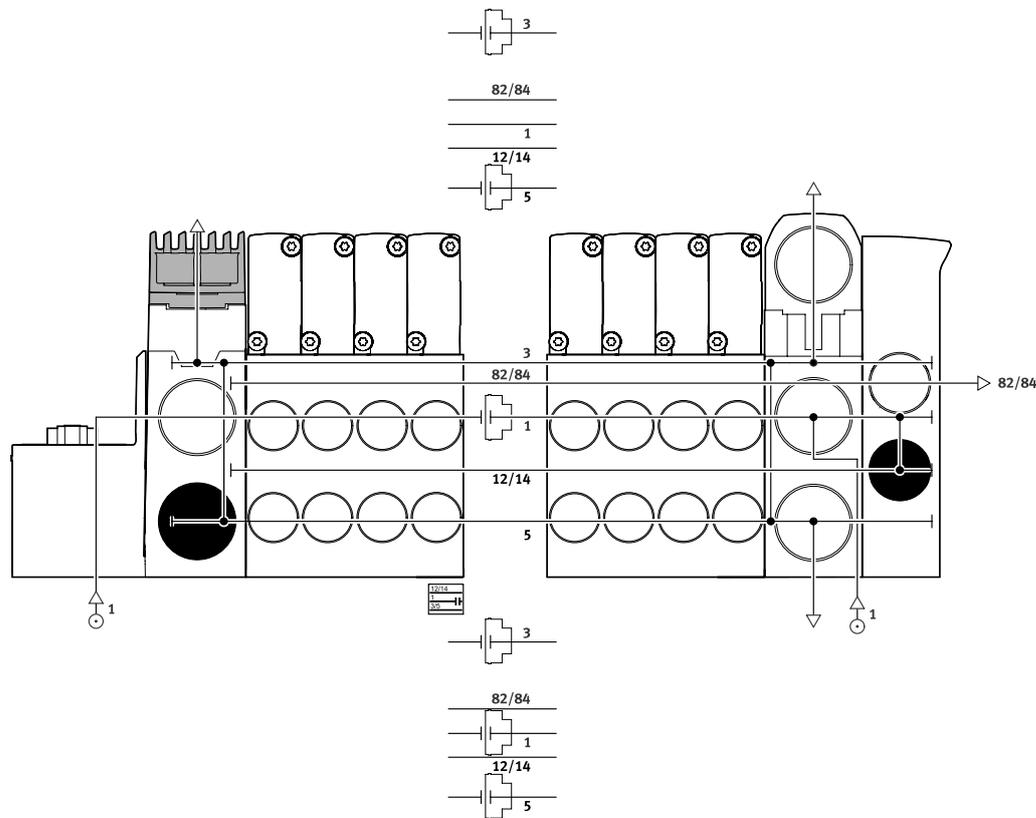

Internal pilot air supply

The diagram on the right shows an example of the configuration and connection of the air supply with internal pilot air supply.

The exhaust air (duct 3/5) is exhausted via supply modules.

The pilot exhaust air (duct 82/84) is discharged via the right end plate.

Special separators are used to create pressure zones.

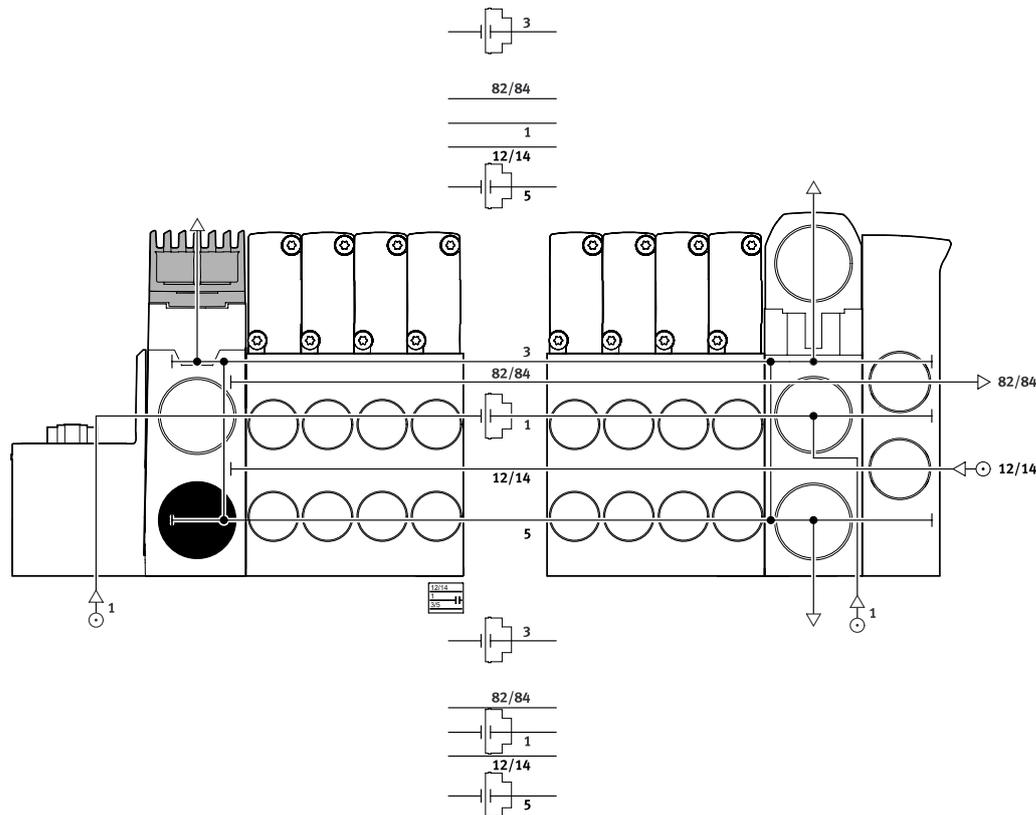

External pilot air supply

The diagram on the right shows an example of the configuration and connection of the compressed air supply with external pilot air supply. Port 12/14 on the right end plate is equipped with a fitting for this.

The exhaust air (duct 3/5) is exhausted via supply modules.

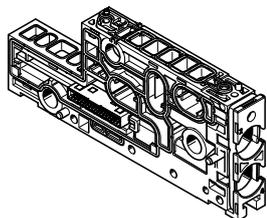

The pilot exhaust air (duct 82/84) is discharged via the right end plate.

Special separators are used to create pressure zones.

Key features – Pneumatic components

Manifold sub-base

VTUX is based on a modular system which consists of manifold sub-bases and valves. The manifold sub-bases are joined together using tie rods and thus form the support system for the valves.

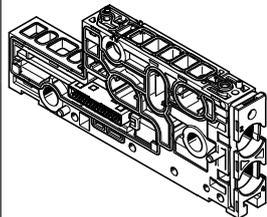

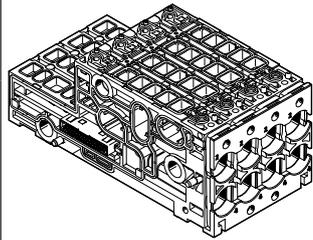

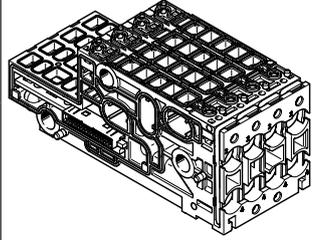

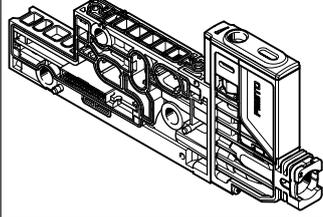

They contain the ducts for supplying compressed air to and exhausting from the valve terminal as well as the working ports for the pneumatic drives for each valve.

The tie rod used to join the manifold sub-bases together consists of a threaded rod and screw.

The manifold sub-bases are available in variants for one or for four valves. The threaded rod/screw combination is selected according to the number and width of the individual manifold sub-bases.

To add further manifold sub-bases, simply loosen the tie rod and adapt using extenders.

There are no restrictions on how extensions. A tie rod could be constructed almost entirely using extenders. The electrical connections for the valve terminal are also integrated into the manifold sub-bases.

Key features – Mounting

Valve terminal mounting

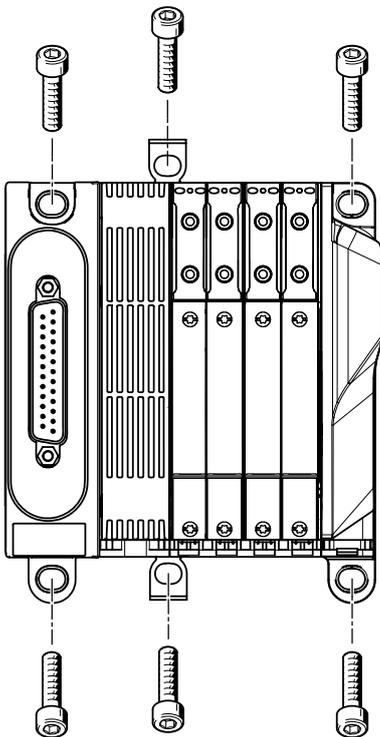

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- Additional mounting brackets
- DIN rail mounting

 **Note**

For valve terminals with manifold sub-bases for vacuum, the mounting position must be selected so that the integrated silencer is protected against the ingress of water and any water that has penetrated can drain away again.

Wall mounting

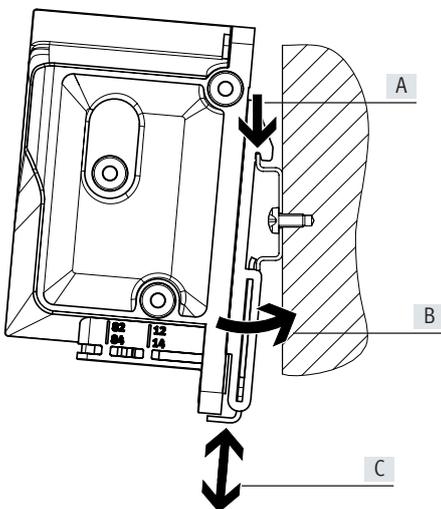

The valve terminal VTUX is screwed onto the mounting surface using four M4 or M6 screws. The mounting holes are on the multi-pin plug connection and on the right end plate.

Optional mounting brackets are also available.

 **Note**

For wall mounting, in addition to the mounting holes in the end plates, mounting brackets for wall mounting should be fitted every 20 cm.

DIN rail mounting

The valve terminal VTUX is attached to the DIN rail (see arrow A). The valve terminal VTUX is then swivelled onto the DIN rail (see arrow B). As a third step, the valve terminal VTUX is fitted on the DIN rail by moving the slide on the DIN rail mounting (see arrow C).

The clamp fastening for DIN rail mounting enables the valve terminal to be mounted on DIN rails in accordance with EN 60715.

 **Note**

The clamping kit locks the valve terminal in a horizontal mounting position.

Key features – Mounting

Tie rods

Configuration

- [1] Left end plate
- [2] Tie rod sections
- [3] Manifold sub-bases
- [4] Tie rod screws

Operating mode

The tie rod on the VTUX is made up of two parts:

- Threaded rods
- Screw

This enables valve terminals of any length to be created. It takes just four steps to assemble the tie rod and the valve terminal:

- Screw the threaded rods into the left end plate
- Push the sub-bases and supply modules onto the threaded rods
- Push on the right end plate and secure using the screws

The tie rod enables the valve terminal to be extended at a later date. This is done by loosening the tie rod screws and disassembling the relevant components. The additional sub-base or the additional supply module is inserted at the required location. The previously disassembled components are then re-assembled.

To compensate for the change in length, the tie rod must be extended by the increase in length. To do this, threaded rods of a suitable length are screwed in place. To determine which components are required, the online spare parts catalogue includes information on how to use the spare parts and a conversion guide.

Tie rod – Components and design

Tie rod (threaded rod)

The threaded rod is used to create a cost-optimised fixed-grid tie rod. The combination of a threaded rod and screw offers the optimum compensation of tolerances (by compressing the seals between the manifold sub-bases).

The valve terminal can be extended almost infinitely at any time using additional threaded rod sections. The threaded rod sections are inserted between the existing threaded rod and are available in different lengths, in each case matched to the manifold sub-bases and supply modules.

Screw

The entire valve terminal is clamped via the tie rod using the screw. Tolerances that occur, for example when the seals are compressed between the manifold sub-bases during assembly, are compensated by the interaction of the screw and the threaded rod.

Ensure that no more than 65 seals, i.e. 64 manifold sub-bases and supply modules, are combined in one valve terminal.

Key features – Display and operation

Display and operation

Signal status indication

Every solenoid coil is assigned to an LED that indicates its signal status.

- Indicator 12 shows the signal status of the coil for duct 2
- Indicator 14 shows the signal status of the coil for duct 4

The valve terminal with serial communication also has an LED for extended diagnostic information.

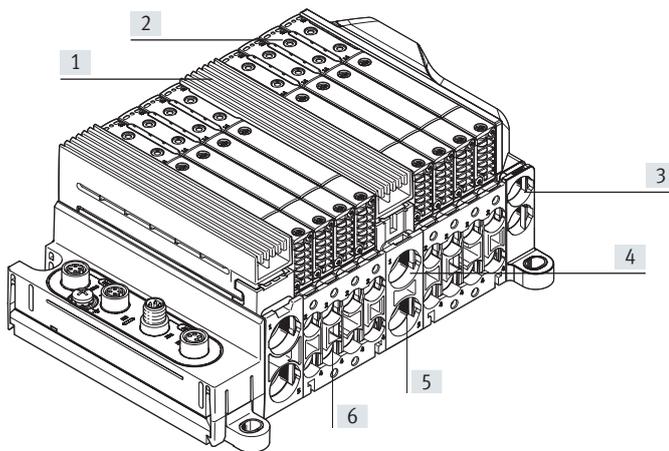

Manual override

The manual override (MO) enables the valve to be switched when not electrically activated or energised. The valve is switched by pushing the manual override.

Alternatives:

- A cover cap (code HR or as an accessory) can be used to operate the manual override in detenting mode.
- A cover cap (code HV or as an accessory) can prevent the manual override from being accidentally activated.

Pneumatic connection and control elements

- [1] Flat plate silencer, duct 3/5
- [2] Manual override (for each pilot solenoid, non-detenting or non-detenting/de-tenting)
- [3] Ports 12/14 for external pilot air supply and 82/84 for pilot exhaust air in the right end plate
- [4] Supply port, duct 1
- [5] Ducted exhaust air, duct 3/5
- [6] Working ports, ducts 2 and 4, for each valve position

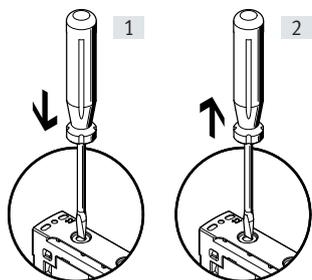

Note

A manually actuated valve (using the manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the manual override.

Key features – Display and operation

Manual override

Manual override with automatic return (non-detenting)

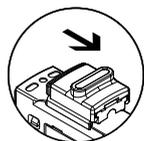

- [1] Press in the plunger of the manual override with a pointed object or screwdriver.
The pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver.
The spring force pushes the plunger of the manual override back.
The pilot valve returns to the normal position as does the single solenoid main valve (this is not the case with a double solenoid valve).

Cover cap for manual override, mounting

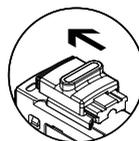

Clip the covering onto the pilot valve.

Manual override with cover cap, detenting without accessories, actuation

- Moving the slider of the cover cap in the direction of the arrow results in:
- The slide locks into the end position
 - The pilot valve switches and actuates the main valve

- Moving the slider of the cover cap in the direction of the arrow results in:
- The slide locks into the end position
 - The spring force pushes the plunger of the manual override back.
 - The pilot valve returns to the normal position as does the single solenoid main valve (this is not the case with a double solenoid valve).

Key features – Electrical components

Internal communication

Parallel communication

Parallel communication is the classic type of multi-pin. Each valve coil is assigned a signalling line within the valve terminal.

When controlled via IO-Link® or the remote I/O system CPX-AP-A, the bus signal is split internally into individual channels for the valve coils.

When operated using the remote I/O system CPX-AP-A or CPX-AP-I, the VTUX valve terminal is displayed as a single module (32 addresses).

Benefits:

- Robust and easy-to-understand control
- Troubleshooting and diagnostics with simple tools directly on the valve terminal

Limitations:

- Number of controllable valve coils is limited
- No diagnostic functions directly on the valve

Serial communication

Serial communication significantly expands the internal communication. This is the infrastructure for highly integrated technology modules and enables bidirectional exchange of data and information between the valve and the PLC.

Significantly more valve coils can be controlled and extensive diagnostic functions are possible.

For operation on the remote I/O system CPX-AP-A or CPX-AP-I, each manifold sub-base is displayed as a single module (with a customised number of addresses).

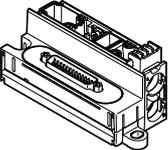

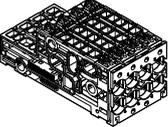

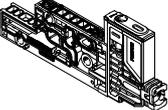

Benefits:

- The number of controllable valve coils is not limited by the communication bandwidth
- Diagnostic functions and, if necessary, sensors directly on the valve
- Troubleshooting and diagnostics also possible remotely via the controller

Limitations:

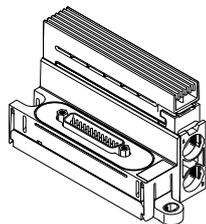

- Manifold sub-bases for four valves available only
- No multi-pin plug connection available
- No IO-Link® connection available

Performance of parallel and serial communication

	Max. number of valve positions	32	64
Special functions			
	Manifold sub-base with vacuum generator	■	■
	Manifold sub-base with input modules (2 inputs per valve position)	–	■

Key features – Electrical components

Electrical connection – Left end plate

The electrical connection from the valves to a higher-order controller is in the left end plate of the VTUX.

Switching between the various connection options is easy: simply swap the left end plate. The pneumatic connections remain unaffected.

The valves are switched by positive or negative logic (PNP or NPN). Mixed operation is not permitted.

Guidelines on addressing for valves/solenoid coils

The addresses are numbered from left to right in ascending order. The following applies for individual valve positions: address x for coil 14 and address $x+1$ for coil 12.

Every manifold sub-base occupies a specific number of addresses/pins:

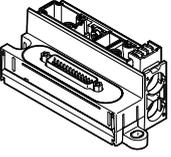

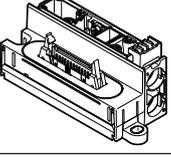

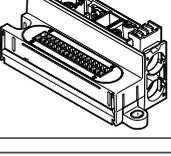

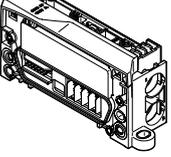

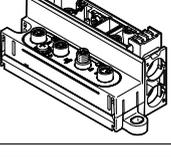

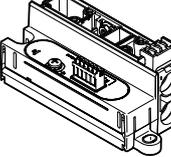

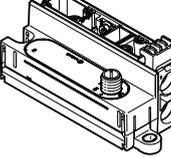

- Manifold sub-base for a valve with one solenoid coil: 1
- Manifold sub-base for a valve with two solenoid coils: 2
- Manifold sub-base for four valves with one solenoid coil: 4
- Manifold sub-base for four valves with two solenoid coils: 8

Note

If a valve with one solenoid coil is mounted on a position for a valve with two solenoid coils, the second address (for coil 12) is also occupied and cannot be used.

Key features – Electrical components

Fieldbus interface / remote I/O system CPX-AP-A

The pneumatic interface (left end plate) serves as an adapter between the two current feeds. All functions and features of the remote I/O system CPX-AP-A are valid in combination with the CPX-AP-I interface.

This means that:

- The valves are supplied via the system supply of the remote I/O system CPX-AP-A

- The valves can optionally be actuated or switched off separately from the outputs

 **Note**
More information can be found at:
→ Internet: cpx-ap-a

Remote I/O system CPX-AP-I

All functions and features of the CPX-AP-I are valid in combination with the remote I/O system CPX-AP-I:

- Power supply via the connection in the left end plate of the VTUX

- Power supply together with other modules or individually for the valve terminal
- Valves actuated via the communication cable from the preceding module

- Cable length of up to 50 m between the modules
- Up to 80 individual modules/valve terminals per bus interface

 **Note**
More information can be found at:
→ Internet: cpx-ap-i

IO-Link®

The IO-Link® interface enables the valve terminal VTUX to be connected to the following systems:

- Remote I/O systems CPX-AP-I and CPX-AP-A from Festo
- Automation system CPX-E from Festo
- CPX terminal
- Control system CECC
- IO-Link master

The maximum distance between the IO-Link master and valve terminal with IO-Link® interface is 20 m.

The 5-pin connecting cables transmit the power supply for the valves; the power supply for the internal valve terminal electronics and the control signals are separate from this.

 **Note**
More information can be found at:
→ Internet: cpx-ap-a

Instructions for use

Operating materials

Operate your system with unlubricated compressed air, if possible. Festo valves and cylinders are designed so that, if used as intended, they will not require additional lubrication and will still achieve a long service life. The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate the entire system with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator requiring them.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal. Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils

When using bio-oils (oils synthesised on the basis of synthetic or native esters, e.g. rapeseed oil methyl esters), the residual oil content of max. 0.1 mg/m³ must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51524 Part 1 to 3) or corresponding oils based on poly alpha olefins (PAO), the residual oil content of max 5 mg/m³ must not be exceeded (see ISO 8573-1 Class 4). A higher residual oil content is not permitted, regardless of the compressor oil, because the permanent lubrication would otherwise be flushed out over a period of time.

For 5/3-way valve, normally closed

For 5/4-way valve, exhausted

Datasheet – Left end plate with IO-Link®

Festo-specific, standardised interface for direct connection via a cable to an IO-Link master.

Valve terminals with IO-Link® interface can be expanded by up to 32 solenoid coils/valve positions.

Up to 32 valve positions can be equipped with single solenoid valves.

IO-Link® for valve terminal VTUX

The IO-Link® interface enables the valve terminal VTUX to be connected to an IO-Link® network.

The maximum distance between the IO-Link master and the valve terminal with IO-Link® interface is 20 m.

The 5-pin connecting cables transmit the power supply for the valves; the power supply for the internal valve terminal electronics and the control signals are separate from this.

The built-in LED is used as a status indicator for diagnostics and maintenance.

Datasheet – Input modules for manifold sub-bases

 Voltage
24 V DC

The digital input modules provide 8 digital inputs in accordance with IEC 61131-2, types 1 and 3 for connecting digital sensors.
The input modules have LEDs to indicate the signal status.

Configuration

On the input module with electrical connection M8, two M8 connections are mounted as a unit using a screw connection. This makes it easy to disconnect both connections from the module at the same time.

When assembled, the entire installation is particularly space-saving. The units also allow inscription labels to be attached.

Datasheet – Manifold sub-base for vacuum

-  - Valve size
10 mm
-  - Maximum vacuum
93 kPa

Operating mode

Description

Vacuum generation for a single valve position can be integrated on the VTUX. No further installations are required.

The vacuum is generated within the manifold sub-base according to the Venturi principle and is available at port 2.

By using a 2x 3/2-way valve, the ejector or pulse function is available at the same time.

With the integrated check valve, vacuum can be held in an energy-saving way.

The pilot air for the valve is supplied via duct 1 of the manifold sub-base. This also applies if there is also an external pilot air supply for the valve terminal.

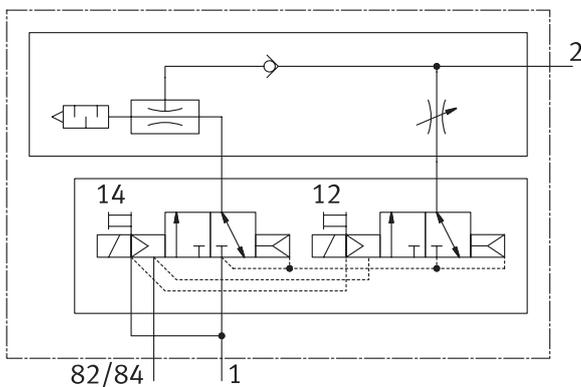

The manifold sub-base for vacuum comprises:

- Adjusting screw for setting the ejector pulse
- Integrated check valve for energy-saving vacuum maintenance
- Integrated silencer
- The corresponding valve must be ordered separately via the configurator

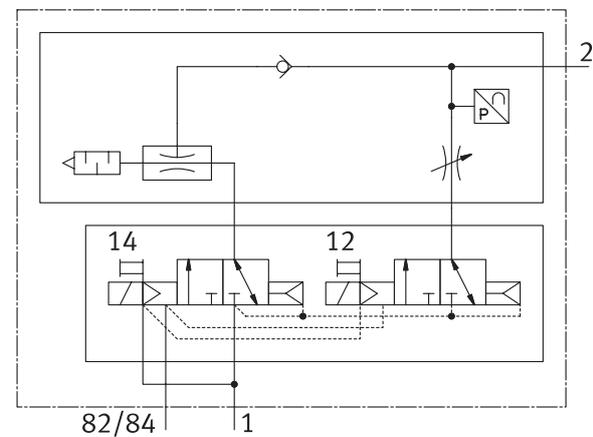

Additional functions are available for the version with serial links:

- Pressure sensor
- Air saving function
- Condition monitoring

Manifold sub-base for vacuum with multi-pin electrical control

Manifold sub-base for vacuum with AP interface electrical control

Datasheet – Manifold sub-base for vacuum

Combination of manifold sub-bases for vacuum and power supply modules		
Ambient temperature	Power supply modules	Number of manifold sub-bases for vacuum per valve terminal
Max. 50 °C	None	4
	After 4 manifold sub-bases for vacuum	Any
Max. 40 °C	None	7
	After 4 manifold sub-bases for vacuum	Any

The integrated vacuum generation places high demands on the valve terminal VTUX. Good heat dissipation is therefore required. Avoid mounting the valve terminal on highly insulating surfaces (e.g. wood or plastic).

Examples of possible configurations at a maximum ambient temperature of 50°C

4 manifold sub-base without intermediate supply

8 manifold sub-bases with intermediate supply

13 manifold sub-base with intermediate supply

 **Note**

The vacuum connection has no filter function. A filter must therefore be installed upstream if contamination of the intake air is expected. This prevents any foreign matter getting in (e.g. when operating a suction cup).

Datasheet – Manifold sub-base for vacuum

Accessories

Ordering data		Code	Valve function	Part no.	Type	
Individual solenoid valve – Valve size 10 mm						
	5/2-way valve					
	Position function 1-64: A	Single solenoid, mechanical spring return	8187057	VUVX-BK10-M52-MZH-F-1T1L		
	Position function 1-64: M	Single solenoid, pneumatic spring return	8187056	VUVX-BK10-M52-A1ZH-F-1T1L		
	Position function 1-64: J	Double solenoid	8187059	VUVX-BK10-B52-ZH-F-1T1L		
	2x 3/2-way valve					
	Position function 1-64: NS	Normally open, mechanical spring return	8187063	VUVX-BK10-T32U-MZH-F-1T1L		
	Position function 1-64: K	Normally closed, mechanical spring return	8187061	VUVX-BK10-T32C-MZH-F-1T1L		
	Position function 1-64: KC	Normally closed, pneumatic spring return	8187060	VUVX-BK10-T32C-A1ZH-F-1T1L		
	5/3-way valve					
	Position function 1-64: G	Mid-position closed	8187066	VUVX-BK10-P53C-MZH-F-1T1L		
5/4-way valve						
Position function 1-64: ND	Exhausted	8187067	VUVX-BK10-P54E-MZH-F-1T1L			
Vacant position – Valve size 10 mm						
	Position function 1-64: L	Cover plate for one valve position	8163948	VABB-XA-10-T		
Manifold sub-base – For one valve						
	–	Compatible with valve terminal VTUX-A-P	Maximum number of solenoid coils 1	Size 1	8188458	VABX-A-P-BV-AH-F
				Size 2	8188462	VABX-A-P-BV-BH-G
			Maximum number of solenoid coils 2	Size 1	8188459	VABX-A-P-BV-AH-A
				Size 2	8188463	VABX-A-P-BV-BH-B
Manifold sub-base – For four valves, without connection for input module						
	–	Compatible with valve terminal VTUX-A-P	Maximum number of solenoid coils 4	Size 1	8188460	VABX-A-P-BV-AH-RVFFF
				Size 2	8188464	VABX-A-P-BV-BH-RVGGG
			Maximum number of solenoid coils 8	Size 1	8188461	VABX-A-P-BV-AH-RVAAA
				Size 2	8188465	VABX-A-P-BV-BH-RVBBB
		Compatible with valve terminal VTUX-A-S	Maximum number of solenoid coils 8	Size 1	8188466	VABX-A-S-BV-AH-RVAAA
				Size 2	8188467	VABX-A-S-BV-BH-RVBBB
Manifold sub-base – For four valves, with connection for input module						
	Sub-base block, additional function 1-64: 0XJ	Compatible with valve terminal VTUX-A-S	Maximum number of solenoid coils 8	Size 1	8196628	VABX-A-S-BV-AH-RV0XJAAAA
				Size 2	8196629	VABX-A-S-BV-BH-RV0XJBBBB
Manifold sub-base for vacuum						
	VB	Compatible with valve terminal VTUX-A-P	Valve function 2x3/2-way, closed, single solenoid	Valve size 10 mm	8213837	VABX-A-P-VE-VB010H
		Compatible with valve terminal VTUX-A-S			8213836	VABX-A-S-VE-VB010H

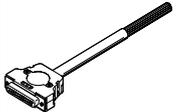

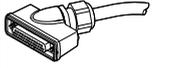

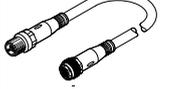

Accessories

Ordering data		Code	Description	Pack size	Part no.	Type
Supply module						
	Connection position type 1-64: U	Manifold sub-base with ports for ducts 1 and 3/5, no plate, no cartridge	Compatible with valve terminal VTUX-A-P	–	8191788	VABX-A-P-BU-12-SHUH-U
			Compatible with valve terminal VTUX-A-S	–	8191789	VABX-A-S-BU-12-SHUH-U
Plate						
	Position function 1-64: UD	Plate for ducted exhaust air, without cartridge, for mounting on supply module			8191794	VABF-XA-12-M2-QX
	Position function 1-64: US	Exhaust plate, for mounting on supply module			8191741	VABF-XA-12-M1-C
Tie rods						
	Tie rod: –	Threaded rod for tie rod, internal hex, spanner size 4 The threaded rod/screw combination is selected based on the number and width of the individual sub-bases.	10 mm	3	8191752	VAME-XA-Z-10
			12 mm	3	8191753	VAME-XA-Z-12
			15 mm	3	8191754	VAME-XA-Z-16
			17 mm	3	8191755	VAME-XA-Z-17
			19 mm	3	8191756	VAME-XA-Z-19
			29 mm	3	8191757	VAME-XA-Z-29
			38 mm	3	8191758	VAME-XA-Z-38
			42 mm	3	8191759	VAME-XA-Z-42
			50 mm	3	8191760	VAME-XA-Z-50
			61 mm	3	8191761	VAME-XA-Z-61
			84 mm	3	8191762	VAME-XA-Z-84
			107 mm	3	8191763	VAME-XA-Z-107
			130 mm	3	8191764	VAME-XA-Z-130
			150 mm	3	8191765	VAME-XA-Z-150
	–	M4 screw with internal hex, spanner size 2.5, for tie rod	30 mm	3	8191747	VAME-XA-S-M4-30
			45 mm	3	8191748	VAME-XA-S-M4-45
Separator						
	–	Separator for pressure zone separation in duct 1		1	8191736	VABD-XA-12-P1
	–	Separator for pressure zone separation in duct 3/5		2	8191737	VABD-XA-12-P2
Wall mounting						
	–	Mounting bracket Wall brackets should be mounted on the valve terminal every 20 cm.		2	8191739	VAME-XA-W
DIN rail mounting						
	Mounting accessories: H	Clamp mounting for DIN rail mounting		2	8191782	VAME-XA-H

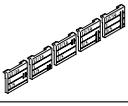

Accessories

Ordering data		Code	Description	Part no.	Type		
Right end plate							
	-	With mounting holes for wall mounting		8191781	VABX-A-ER-E12-JHTH-XR		
Left end plate							
	Electrical connection: MS1	Electrical interface for multi-pin plug connection, IP40	Compatible with valve terminal VTUX-A-P	Sub-D, 25-pin, maximum 24 valve coils	8188447	VABX-A-P-EL-E12-MS1-SHUH-XL	
	Electrical connection: MS1T			Sub-D, 44-pin, maximum 32 valve coils	8206421	VABX-A-P-EL-E12-MS1T-SHUH-XL	
	Electrical connection: MS3			Terminal strip, 34-pin, maximum 32 valve coils	8188449	VABX-A-P-EL-E12-MS3-SHUH-XL	
	Electrical connection: MC			Ribbon cable, 26-pin, maximum 24 valve coils	8188452	VABX-A-P-EL-E12-MC-SHUH-XL	
	Electrical connection: MF1			Electrical interface for multi-pin plug connection, IP20	Compatible with valve terminal VTUX-A-P	8188451	VABX-A-P-EL-E12-MF1-SHUH-XL
	Electrical connection: MS6			Electrical interface for multi-pin plug connection, IP65	Sub-D, 25-pin, maximum 24 valve coils	8188448	VABX-A-P-EL-E12-MS6-SHUH-XL
	Electrical connection: MS8				Sub-D, 44-pin, maximum 32 valve coils	8188450	VABX-A-P-EL-E12-MS8-SHUH-XL
	Electrical connection: APA	Pneumatic interface for remote I/O system CPX-AP-A, IP65	Compatible with valve terminal VTUX-A-P	Maximum 32 valve coils	8189594	VABX-A-P-EL-E12-APA-SHUH-XL	
			Compatible with valve terminal VTUX-A-S	Maximum 128 valve coils	8189595	VABX-A-S-EL-E12-APA-SHUH-XL	
	Electrical connection: API	Pneumatic interface for remote I/O system CPX-AP-I, IP65	Compatible with valve terminal VTUX-A-P	Maximum 32 valve coils	8189592	VABX-A-P-EL-E12-API-SHUH-XL	
			Compatible with valve terminal VTUX-A-S	Maximum 128 valve coils	8189593	VABX-A-S-EL-E12-API-SHUH-XL	
	Electrical connection: IOL	Node with IO-Link®, IP40	Compatible with valve terminal VTUX-A-P	Push-in, maximum 32 valve coils	8189591	VABX-A-P-EL-E12-IOL-SHUH-XL	
	Electrical connection: IOS	Node with IO-Link®, IP65	Compatible with valve terminal VTUX-A-P	M12, maximum 32 valve coils	8189590	VABX-A-P-EL-E12-IOS-SHUH-XL	
Input module							
	Sub-bases, block additional function 1-64: 04J	Electrical connection, spring-loaded terminal		NPN (negative switching)	8196630	VAEM-XA-E-8E-N-K2	
	Sub-bases, block additional function 1-64: 03J			PNP (positive switching)	8196631	VAEM-XA-E-8E-P-K2	
	Sub-bases, block additional function 1-64: 02J	Electrical connection, socket M8		NPN (negative switching)	8196632	VAEM-XA-E-8E-N-V	
	Sub-bases, block additional function 1-64: 01J			PNP (positive switching)	8196633	VAEM-XA-E-8E-P-V
